RESEARCH & WORK EXPERIENCE

John C. Wright Research Group

2015 - Present

Graduate Assistant

Madison, WI

- Using and developing a suite of ultrafast techniques to explore excited state dynamics of thin film semiconductors relevant to photovoltaics (perovskites and transition metal dichalcogenides)—these techniques include transient transmittance, transient reflectance, and transient grating spectroscopies all with tunable pump and probe colors
- Developing fully coherent probes that are exquisitely sensitive to coherent transfer between layers of a heterostructure
- Studying non-linear mixing in non-resonant media
- Practicing open science; for instance, see our work on GitHub: github.com/wright-group & github.com/darienmorrow and the Open Science Framework: osf.io/x9743

Christopher G. Elles Research Group

2014

REU Fellow

Lawrence, KS

- Investigated the excited state dynamics of substituted thiophene photo-rearrangement reactions
- Developed and implemented reaction quantum yield measurement technique
- Used ultrafast transient absorption spectroscopy to probe singlet and triplet excited state manifolds

Michael W. Ducey Research Group

2011 - 2012

Undergraduate Assistant

Saint Joseph, MO

- Investigated the solvatochromism of room temperature ionic liquids (RTILs) in common solvents
- Demonstrated the solvents can induce order in the alkyl side chains of methylimidazolium RTILs
